Trimec Herbicide
Distributed By: Howard Johnson's Enterprises, Inc.
9675 S 60th Street, Franklin, WI 53132

2.4 lbs. (+)-(R)-2-(2-methyl-4-chlorophenoxy)propionic acid equivalent
1.0 lbs. 3,6-dichloro-anisic acid equivalent per ton.

acb-2000

Letter of code on bag shows establishment where manufactured.

TRIMEC® contains 72% (R)-2-(2-methyl-4-chlorophenoxy)propionic acid (trimec acid) and 28% 3,6-dichloro-anisic acid (trimec acid). It is a selective herbicide for the control of a broad spectrum of broadleaf weeds in turf-grass systems. It has a wide margin of safety and can be applied to a broad range of plants with little injury. It is non-toxic to fish and aquatic invertebrates and does not adversely affect non-target plants. It does not leach into water bodies where surface water is present, or to intertidal areas below the mean high water mark. Drain and runoff should not occur in sensitive areas. It is effective in controlling weeds in turf-grass systems and is non-toxic to sensitive plants. It does not contain water when disposing of equipment wash water or rinsates.

This chemical has been used as a characteristic associated with chemicals detected in groundwater. This is one of the chemicals in these soils are portable, particularly where the water table is shallow, may result in groundwater contamination. This is a characteristic of these chemicals in soils and can be detected in groundwater. This is one of the chemicals in these soils are portable, particularly where the water table is shallow, may result in groundwater contamination.
